SUMMARY

Passionate Electronics and Communication Engineering graduate with hands-on experience in Embedded Systems, Arduino-based development, and sensor interfacing. Strong foundation in Embedded C, microcontrollers, and real-time system design. Experienced in building hardware-software integrated applications such as ultrasonic-based object detection systems and wireless communication modules.

EDUCATION

B.Tech - Electronics and Communication Engineering

Dec 2021 - April 2025

Jawaharlal Nehru Technological University, Anantapur

7.61 CGPA

sri venkateshwara college of engineering, kadapa

Relevant coursework: Digital Electronics, Analog Electronics, Signals and Systems, Embedded systems, Internet of Things, communication systems, network protocols

TECHNICAL SKILLS

Design and Modeling Tools: PCB Design, Kicad, Circuit design, Embedded systems, Git and Github

Programming: C, Embedded C, C++(basics), python(basics), shell scripting

Operating systems: Windows, Linux, Android, RTOS

Embedded Systems and Tools: Arduino IDE, Microcontrollers, Sensor Interfacing, Digital Electronics, UART

PROFESSIONAL EXPERIENCE

Cloud computing Intern-ExcelR Company, :

May 2024 – Sept 2024

- Assisted in deploying and managing virtual machines, storage accounts, and network resources on AWS and Azure where we Developed understanding of system-level operations, networking basics, and remote servers.
- Performed basic Linux administration tasks such as file operations, package installation, user permissions, and process monitoring for smooth functioning to avoid server failures.

Web development Intern - ExcelR Company, :

Oct 2024 – April 2025

- Designed and developed highly responsive and scalable web pages using HTML, CSS, and JavaScript, ensuring cross-browser compatibility and mobile-optimized user interfaces.
- Performed code optimization and performance tuning, collaborating in a team environment for front-end solutions.

ACADEMIC PROJECTS

Object Detection and Ranging System Using Ultrasonic Sensors

Dec 2024 - April 2025

Collaborated in a team of three to design model of Defence radar system (ARDUINO IDE).

- Designed and developed a radar-based object detection system using Arduino and ultrasonic sensors.
- Programmed the system in Embedded C using Arduino IDE and integrated a 16x2 LCD display to show distance and system status and Optimized sensor response and system timing for reliable and efficient performance.
- Demonstrated real-time hardware-software integration for embedded applications.

Bluetooth-Controlled Digital Notice Board

April 2025

Improved system usability and communication efficiency in real-time environments.

- Developed a wireless communication-based digital notice board using Arduino Uno and Bluetooth module
- Enabled real-time message transmission from mobile devices to LCD display using serial communication.

CERTIFICATIONS

Python-GREAT LEARNING

June 2023

Strengthened problem-solving skills by applying programming logic using Python for basic scripting.

- Learned basic programming concepts including data types, loops, and functions for career growth.

Internet of things - NPTEL

April 2024

Acquired hands-on understanding of embedded systems and enabling real-time data communication

- Studied image enhancement, filtering, and basic computer vision techniques.
